

Organisations

Organisations define boundaries within a Fabric Blockchain Network

- Each organisation defines:
 - Membership Services Provider (MSP) for identities
 - Administrator(s)
 - Users
 - Peers
 - Orderers (optional)
- A network can include many organisations representing a consortium
- Each organisation has an ID

Consortium Network

An example consortium network of 3 organisations

- Orgs 1 and 3 run peers
- Org 2 provides the ordering service only

Membership Service Provider (MSP) - Overview

A MSP manages a set of identities within a distributed Fabric network

- Provides identity for:
 - Peers and Orderers
 - Client Applications
 - Administrators
- Identities can be issued by:
 - Fabric-CA
 - An external CA
- Provides: Authentication, Validation, Signing and Issuance
- Supports different crypto standards with a pluggable interface
- A network can include multiple MSPs (typically 1 per org)
- Includes TLS crypto material for encrypted communications

Transport Layer Security (TLS)

- Cryptographic protocols that provide communications security over a computer network
- Provides **privacy** and **data integrity**
- Symmetric cryptography is used to encrypt the data transmitted (privacy)
- Public-key cryptography is used to authenticate the identities of the communicating parties
- Include message integrity check to prevent loss or alteration of the data
- All component communication in Fabric secured using TLS (client-peer, peer-peer, peer-orderer, orderer-orderer)

User Identities

Each client application has a local MSP to store user identities

- Each local MSP includes:
 - **Keystore**
 - **Private key** for signing transactions
 - **Signcert**
 - **Public x.509 certificate**
- May also include TLS credentials
- Can be backed by a Hardware Security Module (HSM)

user@org1.example.com	
keystore	<private key>
signcert	user@org1.example.com-cert.pem

Admin Identities

Each Administrator has a local MSP to store their identity

- Each local MSP includes:
 - **Keystore**
 - **Private key** for signing transactions
 - **Signcert**
 - **Public x.509 certificate**
- May also include Transport Layer Security (TLS) credentials
- Can be backed by a Hardware Security Module (HSM)

admin@org1.example.com	
keystore	<private key>
signcert	admin@org1.example.com-cert.pem

Peer and Orderer Identities

Each peer and orderer has a local MSP

- Each local MSP includes:
 - **keystore**
 - **Private key** for signing transactions
 - **signcert**
 - **Public x.509 certificate**
- In addition Peer/Orderer MSPs identify authorized administrators:
 - **admincerts**
 - List of **administrator certificates**
 - **cacerts**
 - The **CA public cert** for verification
 - **crls**
 - List of **revoked certificates**
- Peers and Orderers also receive channel MSP info
- Can be backed by a Hardware Security Module (HSM)

peer@org1.example.com	
admincerts	admin@org1.example.com-cert.pem
cacerts	ca.org1.example.com-cert.pem
keystore	<private key>
signcert	peer@org1.example.com-cert.pem
crls	<list of revoked admin certificates>

Channel MSP Information

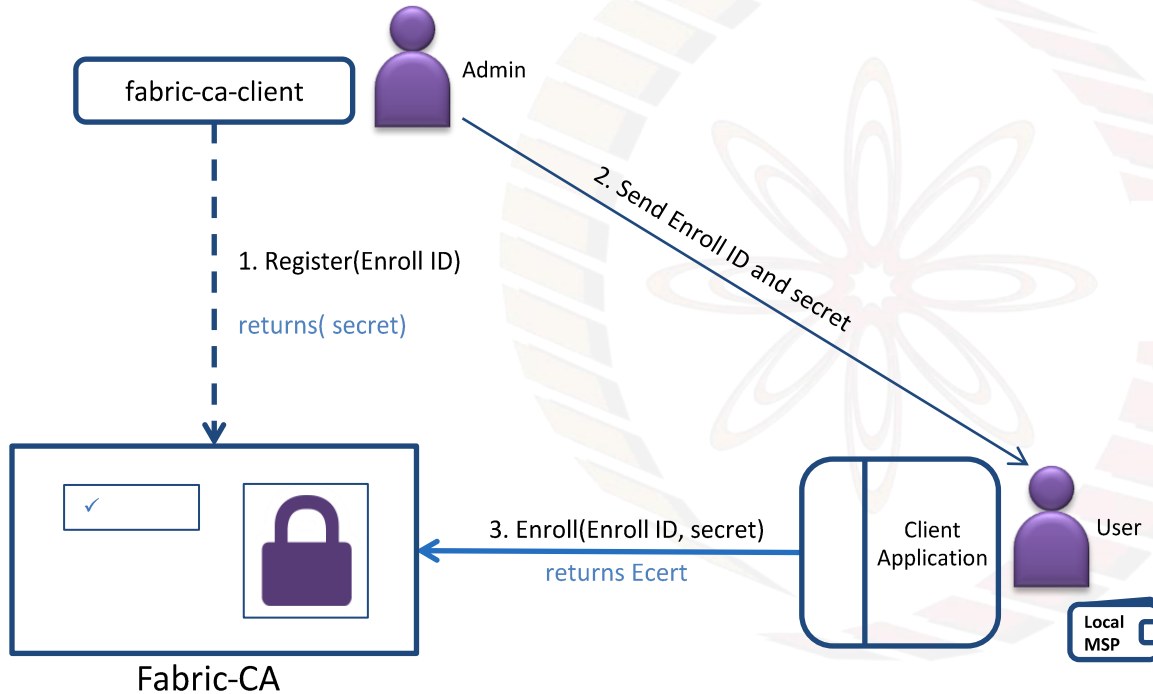

Channels include additional organisational MSP information

- Determines which orderers or peers can join the channel
- Determines client applications read or write access to the channel
- Stored in configuration blocks in the ledger
- Each channel MSP includes:
 - **admincerts**
 - Any public certificates for administrators
 - **cacerts**
 - The CA public certificate for this MSP
 - **crls**
 - List of revoked certificates
- Does not include any private keys for identity

ID = MSP1	
admincerts	admin.org1.example.com-cert.pem
cacerts	ca.org1.example.com-cert.pem
crls	<list of revoked admin certificates>

New User Registration and Enrollment

Transaction Signing

All transactions within a Hyperledger Fabric network are signed by permitted actors, and those signatures are validated

- Actors sign transactions with their enrolment private key
 - Stored in their local MSP
- Components validate transactions and certificates
 - Root CA certificates and CRLs stored in local MSP
 - Root CA certificates and CRLs stored in Org MSP in channel
